

ABSTRACT

An object of the present invention is to downsize a fuel cell, and to stably supply fuel to a fuel electrode. According to the present invention, the above
5 described object is attained by providing a vaporized fuel container 1518 communicated with a liquid fuel container 1517 via a gas liquid separating film 1519 in the fuel cell 1516, in which a liquid fuel 124 supplied to a fuel electrode 102 is stored.
